Chancenkarte Visa approved – Eligible to work in Germany

Dear Hiring Manager,

I am writing to express my interest in the Polymer Engineering / Technical Development position at your organization. With over 13 years of experience in PSR, BIAS, OTR and rubber industries, I have developed strong expertise in extrusion engineering, CNC machine die cutting and programming, rubber extruder operation and technical problem solving on the shop floor. My background equips me to drive productivity, optimize processes and resolve complex technical challenges in high volume tire manufacturing.

In my current role as Assistant Manager – Extrusion at Bridgestone India Pvt Ltd, I have led the development of more than 15 new tire sizes and driven process capability studies that reduced defects by about 15 percent and lifted output by around 10 percent. I manage CNC operations and die cutting, oversee die and insert profile design, govern tooling inventory and lead waste reduction activities in tread production. I also prepare and standardize processes and work standards and provide technical training and machine troubleshooting support to more than 20 junior engineers which strengthens operational discipline and knowledge sharing.

Previously at JK Tyres Ltd and Apollo Tyres Ltd, I contributed to scrap reduction and waste control, optimized cure times and improved machine settings for more uniform tire production. I am skilled in defect and scrap reduction in tyres, extruder related technical issue resolution, process preparation and work standard preparation. I bring hands-on experience in process simulation, statistical process control, rubber compounding and data driven process improvement along with SAP and MS Excel for reporting and analysis.

I am enthusiastic about bringing my technical expertise, problem solving mindset and process optimization experience to a forward thinking organization in Germany. I am confident that my practical knowledge in extrusion, CNC tooling, waste and defect reduction and machine troubleshooting combined with my commitment to quality and continuous improvement will contribute to your team's success.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and skills can support your organization's polymer engineering and production goals.

Sincerely,

Sunith Kumar K S
