Dear Hiring Manager,

I apply for Mechanical Design Engineer, Senior Mechanical Design Engineer roles in Germany where rotating equipment, heavy machinery, and release-quality drawings decide manufacturing outcomes. I bring 5+ years building gearboxes, impellers, blowers, converter hoods, and reclaimer structures, and I deliver CAD-to-shop-floor documentation that supports stable builds and fast change cycles.

At AXISCADES, I design rotating subsystems and sheet metal components using CATIA V5 and AutoCAD, and I ship ISO 1101-compliant drawings with clear BOMs. I improved first-time-right drawing releases to 95% and reduced ECO cycle time by 25% by standardizing templates and tightening release discipline. I also reduced shop-floor rework by 20% through tolerance stack-up analysis, and I shortened press tool lead times by 2 weeks by running structured supplier reviews with cross-functional teams.

Earlier at RTG TechMind, I developed automotive jigs and fixtures using CATIA V5 Surface and Part workbenches. I defined datum and locator strategies, applied K-factors and bend allowances for sheet metal, and ran interference and clash checks to protect Class-A surface quality. I aligned drawings and BOMs with fastener standards and shop-floor limits to support PPAP readiness, and I resolved tolerance deviations within project gates with fabrication and quality teams.

I work well in environments that rely on PDM/PLM controls and clean ERP handoffs. I have exposure to Windchill/Teamcenter workflows, and I support SAP/ERP-driven releases with disciplined BOM structure and traceable ECO documentation. I also communicate clearly in English (C1) and operate in German at B1 level, which helps me collaborate with suppliers and manufacturing teams across sites.

If your team needs a design engineer who improves first-time-right releases, enforces ISO 1101 GD&T, and reduces rework through stack-ups and DFM/DFA alignment, I can contribute from day one. I am ready to relocate to Germany and join your release and manufacturing cadence quickly.

Sincerely,
Ganesh Reddy
