Dear Hiring Manager,

I am applying for **Technical Project Manager roles in Germany** focused on building and delivering robust, scalable Java-based platforms. I bring 18+ years of experience delivering enterprise systems across healthcare, media, and BFSI domains, with deep hands-on expertise in Java, Spring Boot, microservices, messaging, and Oracle-based data platforms. I have worked extensively in integration-heavy environments where reliability, performance, and production stability are critical.

In my current role at Cognizant, I contribute as a senior engineer on outbound messaging and IVR modernization programs in the healthcare domain. I work closely with product owners and delivery leads to translate requirements into well-structured Spring Boot services, JMS/ActiveMQ workflows, and Oracle PL/SQL components. I take ownership of code quality, integration correctness, and production readiness, and I actively participate in RCA and defect resolution to eliminate recurring issues.

German engineering teams value disciplined development practices and clean, maintainable code. I bring strong fundamentals in object-oriented design, REST API development, database modeling, and messaging patterns, along with a solid understanding of Agile delivery. In previous roles, I built and maintained microservices and REST integrations for HBO media platforms, improving workflow reliability and reducing defect leakage. I have also delivered BFSI systems where accuracy, auditability, and controlled releases were essential.

I work effectively in distributed teams and communicate clearly with architects, QA, and stakeholders. I stay hands-on with the codebase, review designs critically, and help resolve complex technical issues without compromising delivery timelines. My approach combines engineering rigor with practical execution.

I would welcome the opportunity to discuss how my experience can support your teams in Germany in building and modernizing reliable Java platforms using Spring Boot, microservices, messaging systems, and relational databases.

Sincerely,
Kaushal Patel
