Dear Hiring Manager,

I am writing to express my interest in Azure Data Engineer opportunities within your organization. With over 4 years of experience in cloud data engineering, I bring strong expertise in designing scalable ETL pipelines, building data lake architectures, and delivering cloud-based analytics solutions using Azure and AWS services.

In my current role at Tata Consultancy Services (TCS), I design and implement Azure Data Factory pipelines to manage multi-source data ingestion across 50+ workflows. I have built and optimized PySpark-based transformations in Azure Databricks, improving processing efficiency by 40%, and developed real-time streaming solutions using Azure Stream Analytics and Delta Lake, reducing data latency by 30%. I also contribute to large-scale cloud migration projects from Oracle to Databricks and Snowflake, ensuring data accuracy and reliability.

Previously at TCS as an AWS Data Engineer, I developed and orchestrated ETL pipelines using AWS Glue, Lambda, and Step Functions, processing millions of records daily. I improved operational efficiency through workflow automation, optimized data migration to Redshift, and enhanced data discovery using AWS Glue Crawlers and Athena. I also collaborated closely with stakeholders to ensure data integrity and monitoring through automated alerts and logging systems.

My technical expertise includes Azure Data Factory, Databricks, PySpark, ADLS Gen2, Snowflake, AWS Glue, Lambda, S3, SQL, and data warehousing concepts. I have strong experience in both batch and real-time data processing, cloud migration projects, and building scalable, production-grade data pipelines in Agile environments.

Germany's strong focus on data-driven innovation and cloud transformation aligns well with my experience in building scalable data engineering solutions. I am confident in my ability to contribute effectively to data engineering teams by improving pipeline performance, ensuring data reliability, and enabling business intelligence at scale. I also have intermediate German proficiency and am actively improving my language skills for better integration.

Thank you for considering my application. I look forward to the opportunity to discuss how my data engineering experience can contribute to your organization.

Sincerely,
Jagadeesh Yerra
