Dear Hiring Manager,

I am writing to express my interest in **DevSecOps, Security Automation, or Cloud Security Engineering** opportunities within your organization. With over 12 years of experience integrating application security into enterprise software delivery, I bring strong expertise in CI/CD security, SAST, DAST, and SCA tooling across cloud and hybrid environments. My work has consistently enabled secure, scalable, and automated software delivery while maintaining developer velocity and operational efficiency.

In my current role at **Dell Technologies**, I lead security integration for 1000+ microservices and 100+ legacy applications, implementing automated vulnerability detection and orchestration across hybrid cloud environments. Through Python-driven automation frameworks, I have reduced manual security reviews by 70% and shortened vulnerability detection time from weeks to under 24 hours. I also establish threat modeling, penetration testing, and compliance initiatives aligned with OWASP Top 10 and CIS Controls, providing executive visibility into organizational security posture.

Previously, at **Alorica and Capgemini**, I designed and deployed enterprise-grade conversational AI solutions and workflow automation frameworks, optimizing operational processes by 50–85% while ensuring compliance and system reliability. My early experience in embedded systems at TCS and Swagene provided a strong foundation in secure firmware and automotive software development, which complements my cloud-native DevSecOps expertise.

I bring hands-on experience with cloud platforms (AWS, Azure), containerization (Docker, Kubernetes), infrastructure-as-code (Terraform, Ansible), and security tools (Checkmarx, SonarQube, Black Duck, Snyk, Burp Suite), combined with a strong understanding of secure SDLC and shift-left security practices. My goal is to help organizations embed security deeply into software delivery pipelines while maintaining agility and scalability.

I am particularly interested in opportunities in Germany, where I can leverage my international experience and technical expertise to strengthen DevSecOps practices and drive measurable security outcomes. I would welcome the opportunity to discuss how my background aligns with your organization's goals.

Thank you for your time and consideration.

Sincerely,
Akshay Krishna
