Dear Hiring Manager,

I am writing to express my interest in opportunities in Embedded Hardware Design Engineering. With over 5 years of experience in electronic system design, PCB development, and hardware validation, I bring strong expertise in designing reliable embedded solutions across imaging, surveillance camera, IP Camera and medical domains.

In my current role as a Lead Design Engineer, I am responsible for end-to-end hardware development for IP-based CCTV camera systems, including architecture design, schematic creation, and multi-layer PCB layout. I have hands-on experience working with high-speed interfaces, SoC integration, signal integrity considerations, and EMI/EMC-compliant designs. My work has contributed to improved system reliability, better performance stability, and higher first-pass success rates.

Previously, I have worked on UAV avionics systems, night vision devices, and automated medical imaging systems, where I developed embedded hardware and firmware solutions using microcontrollers such as STM32, Atmega, and Attiny. I have integrated sensors and communication protocols including UART, SPI, I2C, and MIPI to build real-time embedded systems. Additionally, I have experience in power distribution design, circuit optimization, and system-level debugging during hardware bring-up and validation.

My strength lies in handling the complete hardware lifecycle from concept and schematic design to PCB layout, prototyping, testing, and final system validation. I am also experienced in working closely with cross-functional teams to ensure seamless integration of electronic, mechanical, and software components under tight development timelines.

I am particularly interested in contributing to advanced embedded hardware development in innovative and technology-driven environments. I am also open to relocating to Germany and excited about the opportunity to contribute my skills in an international engineering setting.

Thank you for considering my application. I would welcome the opportunity to further discuss how my experience and skills can contribute to your organization.

Sincerely,
Himani Kamboj
