Dear Hiring Manager,

I am writing to express my interest in Backend Engineer opportunities within your organization. With 1.6 years of experience in building scalable and secure backend systems using Python, FastAPI, and Django, I bring strong expertise in API development, authentication systems, and performance optimization.

In my current role as a Backend Developer at Gloup, I focus on designing high-performance APIs and implementing asynchronous processing to handle concurrent workloads efficiently. I have optimized API response times, developed background job systems using Redis and Celery, and implemented robust API versioning strategies to ensure backward compatibility. I also maintain clear API documentation using OpenAPI and follow structured testing practices to ensure reliability in production systems.

Previously at THIRAN360AI, I developed RESTful APIs using Django to support SaaS and education platforms. I implemented secure authentication and authorization mechanisms using JWT and role-based access control, integrated third-party services, and optimized backend performance through efficient query design. My experience working in Agile environments has helped me deliver clean, maintainable, and scalable backend solutions aligned with business requirements.

I have a strong foundation in backend architecture, including clean architecture principles, asynchronous processing, and performance tuning. I am particularly interested in building reliable and scalable systems that support modern cloud-based applications and distributed environments.

Germany's focus on engineering quality and robust software systems aligns well with my technical approach. I am confident in my ability to contribute to backend teams by improving API performance, ensuring system reliability, and supporting scalable application development. I also have intermediate German proficiency and am actively improving my language skills for better professional integration.

Thank you for considering my application. I look forward to the opportunity to discuss how my backend development skills can contribute to your organization.

Sincerely,

Veeriaperumal K
