Summary

Backend Engineer with 1.6 years of experience building scalable API platforms using Python, FastAPI, and Django. Strong focus on authentication systems, API design standards, and performance optimization. Experience in asynchronous processing, background job orchestration, and production-ready backend systems. Delivered secure, maintainable APIs with clear versioning and documentation. Comfortable working in Agile environments with a focus on clean architecture and reliability.

Core Skills

- **Backend Development:** Python, FastAPI, Django, REST API Design, API Versioning
- **Data & Performance:** Query Optimization, Performance Tuning, Caching (Redis)
- **Architecture & Systems:** Clean Architecture, Microservices Basics, Async Processing, Background Jobs
- **Tools & DevOps:** Celery, Redis, Postman, OpenAPI, Git
- **Security & Authentication:** JWT Authentication, RBAC, Secure API Design
- **Engineering Practices:** Agile, Test Driven Development, Code Reviews, API Documentation

Experience

Gloup (Freelance)

February 2026 – Present

Backend Developer

Remote

- Optimized API performance by implementing asynchronous processing patterns in FastAPI, reducing response latency by 30% under concurrent load.
- Designed and enforced API versioning strategies to maintain backward compatibility across evolving service endpoints.
- Built scalable background job systems using Redis and Celery to handle asynchronous task execution and improve system reliability.
- Developed and maintained API documentation using OpenAPI/Swagger and validated endpoints through structured testing in Postman.
- Improved backend maintainability by organizing services using modular architecture and clean code practices.

THIRAN360AI

September 2024 – January 2026

Junior Backend Developer

Bengaluru, India

- Designed and developed RESTful APIs using Django to support SaaS and education platform functionalities with scalable backend architecture.
- Implemented secure authentication and authorization systems using JWT and RBAC to enable controlled multi-user access.
- Integrated third-party services including payment gateways and Firebase to extend platform capabilities and enable real-time features.
- Optimized database queries and backend logic to improve API performance and reduce response times by 20%.
- Collaborated within Agile teams to deliver backend features aligned with product requirements and release timelines.

Projects

RESTful POS Backend System | Personal Project

- Developed RESTful APIs for inventory management, billing, and tax computation using structured endpoint design and modular architecture.
- Designed scalable transaction handling and reporting endpoints to ensure consistency and reliability under concurrent operations.
- Optimized database queries and indexing strategies to improve performance and maintain data consistency, reducing query response time by 20%.

Learning Platform API | Personal Project

- Built backend APIs for authentication, user management, and content delivery using Django and REST principles.
- Integrated payment gateway systems to enable subscription-based access and secure transaction processing.
- Implemented role-based access control (RBAC) to support secure multi-user environments and controlled resource access.

Education

KSR Institute for Engineering and Technology	2023 – 2025
<i>Master of Computer Applications (Grade: 7.8/10)</i>	<i>Namakkal, India</i>
University of Madras	2018 – 2021
<i>Bachelor of Science in Computer Science (Grade: 7.5/10)</i>	<i>Chennai, India</i>

Languages

- English – Full Professional Proficiency (C1)
- German – Intermediate Proficiency (B1)
