Dear Hiring Manager,

I am writing to express my interest in QA Automation Engineer / Test Lead opportunities within your organization. With over 11 years of experience in software quality engineering, test automation, and API testing, I bring strong expertise in building scalable automation frameworks and ensuring high-quality software delivery across Agile environments.

In my current role as Technical Lead – QA at Tata Technologies, I define test strategies, design automation frameworks using Selenium WebDriver and TestNG, and lead QA teams to ensure strong test coverage and timely delivery. I have integrated automated testing into CI/CD pipelines using Jenkins, reducing build validation time by 40%. Additionally, I leverage AI-assisted tools to accelerate test case design by 40% and have built AI-driven automation using Playwright with OpenAPI/Swagger-based API testing, reducing manual effort by 50% and improving coverage. My focus remains on enhancing test efficiency, regression stability, and overall product quality.

Previously at Conga, I worked as a Senior QA Automation Engineer, where I developed and maintained UI and API automation frameworks using Selenium, Java, and REST Assured. I contributed to stabilizing regression suites, improving execution reliability, and reducing regression testing time by 30%. I also collaborated closely with cross-functional teams to ensure smooth release validation and post-deployment testing.

Earlier at Infogen Labs and Coreview Systems, I gained strong experience in manual testing, API validation, and hybrid automation frameworks across web, IDE-based, and CRM applications. These roles built a solid foundation in defect management, test case design, and end-to-end QA processes.

My technical expertise includes Selenium WebDriver, Java, TestNG, REST Assured, Postman, Maven, Jenkins, and CI/CD-based continuous testing practices. I also have hands-on experience in Agile delivery environments, defect lifecycle management, and cross-functional collaboration with development and product teams. In addition, I am actively expanding my exposure to modern QA practices including cloud-based testing and continuous quality engineering.

Germany's focus on engineering excellence aligns well with my QA experience. I can contribute to improving automation coverage, reducing release risks, and enhancing software reliability. I also have intermediate German skills and am actively improving them for better integration.

Thank you for considering my application. I look forward to discussing how my test automation and QA experience can add value to your organization.

Sincerely,
Vipul Salpekar
