Dear Hiring Manager,

I am applying for **Senior Technical Writer roles in Germany focused on enterprise platforms where documentation quality, security posture, and operational readiness directly affect adoption and support load**. I bring **7+** years across experimentation, analytics, smart licensing, and automation programs, delivering information architecture, doc-as-code workflows, in-product help, and admin documentation that aligns with release governance and compliance expectations.

At **LTI Mindtree supporting Cisco Systems**, I own **Smart Licensing documentation and enablement for secure admin workflows across SSM On-Prem and CSLU**. I partner with product and engineering to define a scalable IA, enforce review SLAs, and publish through GitHub-based doc-as-code pipelines. I **improved discoverability by 30% through SEO tuning and search governance**, and I **reduced support tickets by 30%** by shipping runbooks, troubleshooting decision flows, and release updates that map directly to common escalation paths.

At **Accenture**, I combined Senior Technical Writer and Technical Product Manager ownership across internal platforms (Method One) supporting experimentation, analytics, and GenAI-enabled content automation. Additionally, I led the roadmap and backlog prioritization in Jira, defined KPIs, tracking standards, and governance, and partnered with global engineering teams to strengthen data quality and observability through dashboards. I **improved adoption and reduced turnaround time by 35%** through structured rollout documentation, enablement, and feedback loops, while also coordinating incident/RCA execution, change approvals, and security reviews across **10+ product teams**.

I work confidently in English (C1) for technical writing, stakeholder alignment, and cross-team reviews across global delivery. I also use **German (B1)** for day-to-day collaboration and I continue to improve it for clearer workplace communication and customer-facing documentation discussions in Germany.

Alongside delivery, I stay active in the tech communication community through TCworld, STC, CIDM, and Tech Writer's Tribe participation. I also contribute through volunteering: mentoring women recovering from PTSD via 1:1 peer sessions, delivering cybersecurity awareness sessions for rural communities with ReForest India, and supporting public outreach seminars with Karnataka government collaboration. These engagements strengthen my ability to communicate risk, drive safe behaviors, and write with empathy without compromising precision.

Sincerely,
Kavyashree T
