Dear Hiring Manager,

With about 9.5 years of experience across telecom, healthcare, and workforce platforms, I am writing to express my interest in senior Generative AI and AI Automation roles in Germany. My work focuses on building production ready solutions with Large Language Models, RAG pipelines, and intelligent automation that sit on top of existing ticketing, knowledge, and data systems. This blend of engineering depth and operations focus aligns well with companies that want to turn Gen AI from prototypes into stable, measurable features.

In my current role as Automation and AI Enablement Specialist at Accenture, I design and deliver Generative AI solutions for a major telecom and workforce program. At present I engineer DistilBERT based ticket clustering, automatic routing models, and LangChain driven RAG flows that read telecom runbooks and configuration data. These solutions raise routing accuracy to about 90 percent, shorten triage time on repetitive incidents, and give support teams natural language access to complex knowledge bases. I also deploy internal chatbots with Python and Streamlit, run them on Azure, and integrate RPA components with Blue Prism and Power Automate for German language reporting and catalog data updates.

Earlier at Anthem, I led analytics for payment integrity and emergency claims across multiple US states and delivered verified savings of about USD 380K per year from automated payment checks and USD 5.9M per year from emergency

claim analysis. That work relied on strong SQL, Tableau, and data quality practices in a regulated healthcare environment and required close collaboration with clinical, network, and finance stakeholders. At IBM I supported high volume data platforms for AT and T, which built my foundation in reliable data engineering, impact analysis, and disciplined change and incident management. Together these roles give me an end to end view from raw data and workloads through to LLM powered features, KPIs, and audit ready operations.

Germany appeals to me because of its focus on high quality engineering, strong data protection standards, and long term product thinking. I bring fluent English, elementary German that I continue to improve, and experience working with distributed teams that span countries and time zones. I would welcome the opportunity to discuss how my background in Generative AI, NLP, RAG, Python, Azure, and automation with tools such as Blue Prism and Power Automate can help your teams ship reliable AI features for customers and internal users. Thank you for your time and consideration.

Sincerely,

Akila Yadav S
