Dear Hiring Manager,

I am applying for Senior Field Service Engineer opportunities in Germany within pharmaceutical and biotech environments operating under GMP-regulated standards. With over 11 years of specialised experience in HPLC and UPLC platforms, I have built deep expertise in installation, IQ/OQ/PQ qualification, preventative maintenance, calibration, and critical troubleshooting of chromatography systems across highly regulated laboratories. My work directly supports FDA, GMP, GLP, and 21 CFR Part 11 compliance requirements while ensuring maximum instrument uptime for QC, R&D, and stability testing operations.

In my current role as Senior Service Engineer II at Waters India Pvt Ltd, I lead field service operations across West India, supporting a large installed base of Waters and Agilent LC systems. I serve as a regional technical resource for speciality detectors including ELSD, FLR, RI, and QDA, and manage complex escalations involving binary UPLC and H-Class platforms in coordination with global support (GSS). My responsibilities include executing more than 80 installations and qualifications, supporting 40+ active instruments, and delivering comprehensive Empower 3 configuration and troubleshooting support. I ensure complete audit-ready documentation and reliable system performance across key accounts such as USV, Sun Pharma, Abbott Healthcare, Novartis, BARC, and IIT Mumbai.

Beyond technical execution, I actively contribute to customer capability building and service excellence. I organise ARC HPLC user days, conduct Empower 3 workshops, and have trained over 150 scientists and technicians on system optimisation, detector troubleshooting, and CDS workflows. I also implemented a structured remote support model for industrial clients that resolves approximately 60% of service incidents without onsite visits, reducing downtime and improving operational efficiency. My work has been recognised multiple times, including nominations for Best Engineer of India and Global Star Excellence Award, along with recognition from the President of Waters India for technical leadership and critical installations during the COVID period.

I am now seeking to contribute this experience within the German and broader DACH market, supporting pharmaceutical and biotech customers with reliable lifecycle management of HPLC and UPLC systems. I bring strong cross-functional collaboration skills, customer-facing leadership, English C1 proficiency, and ongoing German language development. I would welcome the opportunity to discuss how my technical expertise and service commitment can support your organisation's field service excellence in Germany.

Sincerely,
Prathamesh Pingulkar
