Dear Hiring Manager,

With over 17 years of experience in DB2 for z/OS engineering and L3 production support for global banking environments, this application is to express interest in senior mainframe and DB2 engineer roles in Germany. My career at BNY Mellon and its affiliate iNautix focuses on keeping critical DB2 ecosystems stable, compliant, and ready for low downtime change. German opportunities are attractive because they combine strong engineering culture with rigorous regulatory expectations, which align closely with the way I already work.

In my current role as Vice President in the DB2 Systems Group at BNY Mellon, I plan and deliver DB2 related upgrades using tools such as BMC AMI, QMF, and Optim while coordinating APAR and PTF rollouts via SMP/E to cut downtime for multiple business units. I harden subsystems through ZPARM tuning and UTS migrations, govern IBM, BMC, and Rocket licenses with zero lapses, and lead ITIL aligned incident, problem, and change workflows. I also build runbooks and REXX or JCL automation that give L2 and L3 teams clear, repeatable paths for DR tests and day to day operations.

Earlier as a Senior Systems Programmer in L3 production support, I resolved complex incidents across DB2, CICS, and z/OS, including dumps and contention cases that impacted business critical applications. I developed utilities in REXX to speed triage, supported IBM, CA, and BMC fix implementation through SMP/E, and delivered knowledge transfer sessions on DB2 concepts that reduced handoff friction and repeat issues. These experiences built a habit of combining deep technical work with clear documentation, stakeholder communication, and audit ready evidence, which is essential in regulated financial environments.

With a Chancenkarte Visa, I am open to relocation to Germany and continuously build my German language skills alongside English at full professional level. I would welcome the chance to discuss how this DB2 for z/OS, ITIL, and DR background can support your mainframe landscape and help your teams deliver reliable, compliant services. Thank you for considering my application.

Sincerely,
Lakshmi Prabha S
