Dear Hiring Manager,

Germany's logistics and SaaS teams need operations professionals who can connect customer impact to what happened across systems, including tickets, ERP events, API responses, billing triggers, and delivery milestones and then drive structured resolution. That is the work I deliver today at **Quantum ID Technologies** as a **Senior Analyst of eCommerce Operation**, supporting cross-border logistics customers with SLA-focused execution and disciplined incident management.

At Quantum ID Technologies, ownership includes day-to-day eCommerce operations support, escalations, and fast issue isolation using **CRM context + ERP event logs + API validation (SoapUI, Postman)**. Reporting in **Power BI and Excel** turns operational noise into clear trends for leadership—volume drivers, repeat defect themes, and SLA risk—helping reduce incidents and escalations by **20%** while improving CSAT and first-contact resolution through SOP updates and team coaching.

Current scope also includes **onsite operations for major Chinese enterprise customers including SF Express and Yanwen Express**, where execution quality and response time directly impact delivery performance, customer trust, and renewal risk. In addition, selection for an **upcoming US warehouse onsite assignment** strengthens readiness for high-tempo warehouse operations and cross-functional coordination, preparation includes operational rigor around shipment flow, handoffs, and compliance-driven documentation (AWB/manifests) typically expected in hub environments.

Earlier experience in global banking and fintech support sharpened compliance and communication under pressure. High-volume omnichannel queues across the US, UK, and African markets required precise evidence capture, KYC checks, and dispute/fraud triage - work that helped teams close cases faster and reduce chargebacks by 10%, while also cutting handle time by 8% through improved call flows and FAQs.

Value for Germany-based teams: faster issue isolation across CRM + ERP + APIs, clean escalation notes engineering can act on, and reporting leaders can use immediately to protect SLAs and backlog health. German (B1) supports day-to-day collaboration, and relocation readiness keeps start timelines practical.

Sincerely,

Saifuddin Gani
