Dear Hiring Manager,

I am writing to express my interest in **Java Backend Engineer or Software Engineer** opportunities within your organization. With over 4 years of experience in building enterprise-grade backend systems and microservices architectures, I bring strong expertise in Java, Spring Boot, and cloud-native application development across distributed environments.

In my current role at **Wissen Technology**, I work on developing scalable backend services using Java 17/21 and Spring Boot, designing microservices architectures with Docker and Kubernetes, and improving system modularity through service decomposition and API standardization. I actively contribute to building AI-assisted development workflows using tools such as GitHub Copilot, LangChain, and LangGraph, while ensuring code quality, maintainability, and delivery efficiency.

Previously, at **AKHM Software Solutions**, I developed and optimized RESTful microservices for high-volume e-commerce and booking systems, implementing JWT-based security, Kafka-based event-driven processing, and database optimization using MySQL and Hibernate. I improved API response performance significantly through caching, pagination, and multi-threading, while also building CI/CD pipelines using Jenkins and Git-based workflows for reliable deployments.

I have strong hands-on experience across backend architecture, distributed systems, cloud infrastructure (AWS), and event-driven systems using Apache Kafka. My focus is on delivering scalable, high-performance systems with strong reliability, observability, and production stability.

I am particularly interested in opportunities in Germany, where engineering excellence, system scalability, and structured software delivery practices are highly valued. With my German language proficiency (B1) and experience working in Agile, cross-functional teams, I am confident in my ability to integrate quickly and contribute effectively.

I would welcome the opportunity to discuss how my technical experience and backend engineering expertise can support your organization's goals.

Sincerely,

Karan Kumar
