Dear Hiring Manager,

I'm a backend engineer with 3.8+ years building and scaling Java microservices and REST APIs in Spring Boot, and I'm keen to contribute that experience to a Germany based product team. I focus on reliable services, clean interfaces, and measurable performance wins whether that's faster endpoints, sturdier auth, or smoother releases across squads.

Most recently at Wissen Technology, I shipped interview scheduling and evaluation features on Spring Boot, standardizing DTOs and validations to lift developer throughput by 10%. I design clear service boundaries and JPA data models that reduce cross-service coupling, and I containerize with Docker/Kubernetes so releases are consistent and observable from day one. I keep quality strong with unit tests (JUnit/Mockito) and code reviews that protect long-term maintainability.

Previously at AKHM Software Solutions, I improved API responsiveness for hotel/travel flows by introducing pagination, filtering, and caching cutting P95 latency from 600 ms to 350 ms. I implemented Spring Security with JWT and OTP to reduce authentication errors and checkout drop-offs, tuned indexes and queries on MySQL/PostgreSQL for reliable reads/writes at peak, and documented contracts with OpenAPI/Swagger to speed integration for partner teams.

I bring hands-on skill with Java 8/17/21, Spring Boot/MVC, Spring Data JPA/Hibernate, REST/JSON, MySQL/PostgreSQL, and practical CI/CD with Jenkins and Kubernetes. I collaborate well with Product/QA/SRE, communicate clearly, and default to clean code and solid logging so incidents are easier to triage. I'm EU relocation ready and value transparent processes, data privacy, and security by design aligned to EU expectations.

I'd welcome the chance to discuss how my background in performance tuning, secure APIs, and dependable delivery can support your roadmap. Thank you for your time looking forward to speaking.

Sincerely,

Karan Kumar
