Dear Hiring Manager,

I am writing to express my interest in Senior QA / SDET opportunities in Germany. With 12+ years of experience across EdTech, imaging, and airline systems, I build automation and quality practices that give product teams confidence to release frequently and safely. My focus is on robust Playwright and Selenium frameworks, API and contract testing with Rest Assured and Postman, and CI/CD quality gates in Jenkins and GitHub Actions. Alongside this, I bring hands-on accessibility expertise aligned to WCAG 2.2 and ACR/VPAT expectations, which is increasingly relevant in the EU context.

In my recent roles with Curriculum Associates and Adobe, I have led greenfield automation initiatives using Playwright and TypeScript, containerized in Docker and integrated into CI pipelines. These frameworks reduced manual regression effort and lifted stability for cross-browser and cross-platform releases. AI-assisted test generation and log triage helped shorten failure isolation and keep pipelines healthy. At the same time, I formalized accessibility checks including MathML and TTS flows, partnering with designers and engineers to produce audit-ready ACR/VPAT documentation that met enterprise customer requirements.

Earlier at Amadeus and Unisys, I strengthened complex transactional journeys in airline booking, payment, and interline billing. Selenium-based E2E suites, REST validations, and SQL data checks protected revenue-critical flows and reduced production defects for B2B integrations. I also scaled test suites, refined acceptance criteria with product owners, and contributed to KPI-led QA governance so that defect SLAs, release readiness, and audit evidence were clear before every deployment. This combination of deep automation skills, risk-based testing, and stakeholder communication prepares me well for working in distributed, multicultural teams in Germany.

Germany's focus on engineering excellence, safety, and regulatory compliance matches how I approach quality. I am open to relocation, continue to build my German language skills, and would welcome the chance to contribute to high-impact digital products in your organization.

I would appreciate the opportunity to discuss how my experience in test automation, API quality, accessibility, and CI/CD can support your teams and customers.

Sincerely,

Satyam Bharti
