Dear Hiring Manager,

I am applying for senior validation/HiL integration roles in Germany where rigorous ECU testing, ADAS/ESP verification, and supplier alignment are critical to safe, on-time SOP. I bring 9+ years across Daimler, Mercedes-Benz, Visteon, and TCS, with depth in HiL/SiL, UDS/OBD diagnostics, and requirements traceability from DOORS/DNG, JIRA to and achieve quality gates.

At Daimler India Commercial Vehicles, I lead LABCAR deployment and multi-ECU bench integration (body, powertrain, telematics). I linked CANoe with IPG TruckMaker, enforced DOORS/JIRA coverage, and ran 8D triage raising feature test coverage to 85% and cutting pre-SOP defect leakage to 3%. Tooling includes ETAS LABCAR and Vector VT system CANoe/CANalyzer/CAPL, Automotive Ethernet, and structured evidence for Daimler CVDS-style reviews.

Previously at Mercedes-Benz R&D India (Xpheno), I validated ESP/ADAS functions (cruise, limiter, parking, hold) through HiL/SiL and automated WWB flows with PROVEtech and Synopsys SILVER reducing manual execution time by 35% and improving regression throughput. At Visteon, I assured Nissan instrument-cluster SW validation, building black-box suites for UDS DIDs/DTCs validation, language packs, and MCAN/J-CAN; I cut defect repro time from 2h to 30m via cleaner initializations and log scripting. Earlier at TCS on Citroën C3, I owned RVC/RPAS component specs through APQP (RFQs, DVP, DFMEA), achieving 90% spec conformance and smoother gate predictability.

I thrive at the intersection of systems, software, and test—designing robust test strategies, automating where it counts, and partnering with suppliers to de-risk launches. I hold an M.Tech in Automotive Electronics (BITS Pilani, 2025) and German A1. I am comfortable in international cross-functional settings and keen to build my German further on-site. I would welcome the chance to discuss how my HiL/SiL expertise, ADAS/ESP validation background, and bench-build experience can strengthen your verification pipeline and SOP readiness.

Sincerely,

Mohammed Sheedh
