Dear Hiring Manager,

I am applying for **Senior Internal Auditor roles in Germany** within financial services. With 14+ years of experience in executing risk-based audits across multi-branch operations, I bring strong depth in control testing, audit working papers, and evidence-led reporting. My audits consistently cover lending documentation quality, KYC compliance controls, reconciliations (BRS), trial balance validation, exception management, and remediation tracking through to closure.

In my current role at **Muthoot Finance (Muthoot Group)**, I lead audits across **25+** branches per year across lending and group units. I plan audit scopes based on risk signals and prior findings, run walkthroughs with branch stakeholders, and test control effectiveness through structured sampling & documentation review. Additionally, I verify KYC files, customer documentation for compliance, validate loan file completeness, and review reconciliations & trial balances to detect mismatches, policy deviations, and potential fraud indicators. I document results with clear evidence, risk ratings, and corrective actions so leadership can act quickly and branches can close gaps without disrupting operations.

Moreover, I deliver scheduled audit cycles that match how Germany-based financial services run continuous assurance: quarterly management audits, monthly vehicle finance audits, forex audits, and online/system audits. I maintain consistent audit trails, apply repeatable checklists and exception logs, and track remediation status with accountable owners. This approach improves closure speed by 20% through prioritization of high-risk observations, disciplined follow-up, and clear escalation when controls fail.

I will bring strong governance discipline, practical stakeholder management, and regulator-aligned execution to your Germany team. As I work comfortably in high-volume environments, communicate findings clearly, and maintain documentation standards, it will support auditability and regulatory readiness. I would welcome the opportunity to discuss how my experience in risk-based audits, KYC controls, financial reconciliations, and remediation closure can support your internal audit plan and control assurance goals.

Sincerely,

Vimal G
