Dear Hiring Manager,

I am a life sciences commercial leader with 14 plus years across MEA and India, now targeting growth roles in the DACH region. I combine hands-on lab depth in cell culture, flow cytometry, ELISA, purification, and chromatography with enterprise selling, channel enablement, and disciplined Salesforce hygiene to grow pipeline and forecast with accuracy.

In my recent tenure at Integrated Gulf Biosystems, I managed a multimillion portfolio across Thermo Fisher, Sartorius, and Hamilton, exceeded annual targets by 15 percent, lifted share in strategic accounts by 10 percent, and closed contracts worth 15M AED. I now own a product category roadmap across UAE, KSA, Qatar, and India, aligning assortment to demand signals, negotiating SLAs, and protecting gross margin while improving availability and win rate.

Earlier, at Thermo Fisher Scientific, I ran a regional inside-sales motion that achieved more than 100 percent of target in year one, progressed stage-based forecasts with reliable cadence, and won instrument deals by aligning technical fit and financing. My foundation in research at Syngene and CCMB keeps my customer conversations precise and credible, while coaching new hires on CRM hygiene raised pipeline quality and activity discipline.

I bring a channel-first mindset, robust QBR and pricing discipline, and a track record of vendor partnership and rebate management. I am fluent in English at C1 level and learning German at A2 level. I am ready to relocate to Germany and can complete interviews across time zones. I would value the opportunity to discuss how this mix of scientific credibility and commercial execution can help your team expand market share and improve forecast accuracy in the DACH market.

Sincerely,
Kesav Kumar
