Dear Hiring Manager,

As a Senior Salesforce QA / QA Lead specialising in Salesforce and Ncino platforms, I focus on predictable releases and low production risk for complex enterprise programmes. Over 10+ years I have led end-to-end testing on Salesforce CRM and Ncino platforms across banking, insurance and oil and gas, combining hands-on QA delivery with leadership of onshore and offshore teams.

In Halliburton, I owned QA for the Salesforce-based PE Asset 360 platform integrated with SAP and Vorto. I defined QA strategy and sprint-level test plans, designed functional and regression suites for asset moves and returns, and used Azure DevOps and SQL checks to validate integrations. Tighter acceptance criteria and focused defect triage helped reduce late-cycle change requests and lower defect leakage for global logistics users.

At OakNorth Bank, I led QA for Ncino corporate lending journeys on Salesforce, from lead creation through loan completion. I defined test conditions and regression packs for each loan stage, managed defects in JIRA with business analysts and developers, and refined end-to-end scenarios with UAT stakeholders. These changes stabilised recurring release cycles and reduced UAT defects for the digital banking platform.

Earlier at Capgemini with AXA XL, I directed QA for Salesforce-based GISMO and Prebind platforms integrated with policy administration and reporting systems, leading offshore teams of QA engineers and using Azure DevOps dashboards to drive risk-based testing and release decisions.

Experience at VirtusaPolaris for GE and Citi built a strong base in functional, regression, cross-browser and integration testing on large banking and e-commerce programmes using HP Quality Center.

I work confidently with Salesforce Lightning, Ncino, API testing, SQL-based validation and tools such as Azure DevOps, JIRA, HP Quality Center, TFS, Postman and SOAP UI. I mentor QA engineers, refine user stories with product owners and business analysts, and help Agile Scrum teams align on acceptance criteria, test coverage and release readiness. My German at A1 level and long experience in cross-cultural setups support collaboration with Germany-based stakeholders.

I would welcome the opportunity to contribute as a Senior Salesforce QA / QA Lead in Germany and to discuss how this background in Salesforce and Ncino testing, test management and release governance can support your delivery goals.

Sincerely,
Kanchana Bande
