Dear Hiring Manager,

As an **Anti-Financial Crime (AFC) & Risk Analytics Specialist** with over four years of experience in regulated banking and FinTech environments, I am seeking to contribute to a Germany-focused risk, compliance, or financial crime analytics team. My experience under EU AMLD6 and German GwG frameworks, combined with hands-on exposure to Customer Risk Rating (CRR), Annual Risk Assessments (ARA), and fraud analytics, enables me to support institutions in strengthening risk governance and control effectiveness.

In my current role as a **FinCrime Analyst (Mid-Level) at Revolut**, I apply and validate CRR methodologies to ensure accurate and consistent customer risk classification. I analyse fraud typologies, including APP and CNP patterns, and behavioural indicators that inform CRR calibration and risk model enhancement inputs. I prepare structured risk trend analyses and control effectiveness metrics for Annual Risk Analysis (ARA) and compliance reporting. Through transaction monitoring optimization and enhanced high-risk assessments covering PEP and sanctions exposure, I have contributed to approximately 30% false-positive reduction while maintaining audit-ready documentation standards. I also present risk insights to compliance stakeholders to support governance discussions and control refinement.

Previously at **HSBC in the United Kingdom**, I gained broad exposure across payments risk, financial inclusion oversight, and KYC/CDD operations. In high-value and international payments, I processed £5M+ transactions under AML, sanctions, and PSD2 controls, conducting risk-based reviews and escalating suspicious activity. Within Financial Inclusion and Vulnerability, I supported enhanced monitoring frameworks, contributed to control testing documentation, and helped reduce false positives by approximately 30% through rule optimisation feedback. In digital onboarding, I performed CDD and EDD under GwG-aligned frameworks, improved onboarding turnaround time by 35%, and maintained zero audit findings across QA reviews.

My earlier experience as a **Junior Risk & Operations Analyst** strengthened my foundation in data structuring, behavioural analysis, and risk reporting dashboards. Coupled with an MSc in Management and a Computer Science background, I bring both analytical depth and technical understanding to financial crime risk environments. I am particularly motivated to contribute within Germany's regulatory landscape and actively improving my German language proficiency towards professional working proficiency while delivering measurable impact in AFC and risk analytics functions

I would welcome the opportunity to discuss how my experience in CRR application, ARA contribution, fraud analytics, and governance documentation can support your organisation's financial crime prevention and regulatory compliance objectives.

Sincerely,

Diptyajit Biswas
