Dear Hiring Manager,

Data engineering and BI work sit at the center of how reliable decisions get made. With 6+ years at Ramco Systems supporting aviation clients, I build and validate data products that maintenance and supply-chain leaders trust in high-stakes environments. My strength is turning complex operational data into accurate, explainable reporting and dashboards using SQL, Python, and modern cloud platforms.

In my current role as Senior Systems Analyst, I own end-to-end data accuracy across aviation ERP and BI modules. I design SQL validation suites, automate source-to-target checks, and reconcile cross-module datasets to prevent drift before it reaches leadership reporting. This work reduced reporting defects by 30% and improved planner turnaround time by 15%, while keeping releases audit-ready and stable across production landscapes.

My delivery style fits fast, cross-functional teams. I partner closely with business stakeholders to translate operational requirements into clean data models, ETL logic, and KPIs, then ship Power BI and SSRS dashboards that drive daily decisions. I also support AWS EC2 and S3 environments, coordinate releases, and resolve incidents through root-cause analysis, which keeps service levels high and downtime low.

Germany's aviation, mobility, and industrial tech sectors rely on dependable data pipelines and rigorous quality standards. I bring deep domain exposure in aviation MRO plus a hands-on data engineering toolkit (SQL, Python, AWS, Snowflake, Databricks, Power BI/SSRS). I am ready to relocate and contribute to teams building scalable analytics platforms and trusted BI for operational excellence. Thank you for your time, and I would welcome the chance to discuss how this background can support your goals.

Sincerely,

Hariharan Ganeshkumar
