Dear Hiring Manager,

I am writing to express my interest in the **Senior PAM / EPM Architect / Platform Owner** position. With over 11 years of experience leading enterprise Privileged Access Management (PAM) and Endpoint Privilege Management (EPM) initiatives across global automotive and manufacturing environments, I offer a strong record of strengthening privileged access governance, modernizing security platforms, and significantly reducing enterprise risk exposure.

Currently, I serve as **PAM / EPM Architect & Platform Lead at Jaguar Land Rover (via TCS)**, where I lead a distributed global team supporting both corporate IT and operational technology (OT) environments. I own and govern enterprise-wide PAM and EPM platforms securing more than 800 privileged users and thousands of servers and endpoints across multiple international manufacturing sites.

One of my key achievements has been driving a large-scale endpoint privilege transformation initiative, successfully removing full administrative access for over 10,000 users and transitioning them to structured, policy-based EPM control profiles. This strategic shift substantially reduced privileged risk exposure while maintaining operational continuity across engineering and manufacturing systems.

In parallel, I led platform modernization efforts by integrating PAM ecosystems with SIEM, SSO, MFA, and SAML-based authentication frameworks. These enhancements strengthened monitoring and audit visibility, improved identity federation, and aligned privileged access controls with Zero Trust principles and ISO 27001 governance standards. I also directed the complete migration from WALLIX to BeyondTrust PAM, overseeing architecture redesign, role rationalization, secure credential transition, and zero-disruption decommissioning. My responsibilities include high-availability and disaster recovery design, credential lifecycle governance, access certification, rotation policies, and compliance alignment with SOX, GDPR, and internal ISO-based frameworks.

Previously at Atos Syntel, I led a team of five engineers delivering global CyberArk enterprise implementations, including Vault, DR Vault, PVWA, PSM, CPM, and EPV architecture and deployment. These initiatives consistently enhanced privileged access hygiene, audit readiness, and operational resilience in complex enterprise infrastructures.

I am particularly motivated to contribute to organizations that prioritize secure digital transformation, mature identity governance, and Zero Trust architecture. With professional-level English proficiency (C2), intermediate German (B1), and experience leading cross-functional global teams, I bring both technical depth and strategic platform leadership capability.

I would welcome the opportunity to further discuss how my experience in enterprise privileged access transformation and security platform ownership can support your organization's cybersecurity objectives.

Sincerely,
Harshit Laad
