Dear Hiring Manager,

I am writing to express interest in a Senior Solution Architect / Senior Java–Spring role. With 16+ years building enterprise platforms, I specialise in microservices, API-led modernisation, and CI/CD governance that improve release quality, security, and reliability. I combine domain-driven design with pragmatic delivery to help engineering teams ship predictably.

Across MASDR Data Solutions and Tata Consultancy Services, I have led Spring Boot–based service modernization, defined coding and testing standards, and embedded quality gates (SonarQube, Fortify, Nexus IQ) in Jenkins/UCD pipelines to prevent defects from reaching pre-prod. I also design OAuth2 patterns on Apigee with reusable shared flows and KVMs to standardise authentication and reduce security incidents.

Recent work includes using OpenRewrite to automate Spring migrations and establishing base frameworks that accelerate forward engineering. I built channel-agnostic, contract-first APIs (OpenAPI) reused across web, mobile, and field-office channels, and introduced APM-driven tuning with Dynatrace/Splunk to lower p95 latency and MTTR during peak loads. These changes improved throughput, reduced rework, and made release decisions data-driven.

I partner closely with product, security, and infrastructure to translate requirements into stable, observable services. My toolset spans Java 8–21, Spring Boot, Spring Data JPA/Batch, JUnit/Mockito, Oracle/SQL Server/MongoDB, and container-friendly CI workflows. I value simple, maintainable designs, clear acceptance criteria, and measurable outcomes.

I am available to interview at short notice and am open to relocation to Germany. Thank you for your time, I would welcome the opportunity to discuss how my experience in DDD architecture, API strategy, and release governance can support your roadmap.

Sincerely,

Karthikeyan Palanisamy
