Dear Hiring Manager,

I am an **RTL / FPGA Design Engineer** with 5+ years of experience delivering RTL solutions for aerospace and industrial systems, and I am interested in opportunities in Switzerland. My background combines Verilog/VHDL RTL, protocol implementation, and timing-driven digital design with collaborative work in cross-functional product teams.

My current role at **Klok Systems India** involves owning RTL design for FPGA modules that implement Device DMA, Device Interface, PCI Interface, MIL-1553B, and device bus arbitration. These designs are developed to strict performance and timing requirements and integrated with wider system architectures. Earlier at Swan Sorter Systems, I implemented color-sorting pipelines on Xilinx Zynq, built AXI DMA paths to DDR memory, and programmed Toshiba image sensors, taking designs from concept to production hardware.

Modern verification practices and clear documentation are at the core of my work. I support simulation and coverage analysis, address issues raised by verification teams, and refine RTL to improve quality and maintainability. **Conceptual Design Documents (CDD), Module Requirements Documents (MRD), and Interface Control Documents (ICD)** are part of my regular responsibilities, ensuring that requirements, design, and tests stay aligned throughout the lifecycle.

Working closely with hardware, software, and verification engineers, I contribute to design reviews, source-code reviews, and integration activities. This collaboration helps teams in resolving interface issues early and meeting milestones without compromising on technical depth. I communicate clearly with stakeholders and enjoy contributing to a culture of continuous improvement.

Alongside English at full professional proficiency, I speak German at B1 level. Relocating to Switzerland to join an innovative engineering environment is a natural next step in my career.

Thank you for considering my application. I would welcome the chance to discuss how my RTL and FPGA experience can support your projects in Switzerland.

Sincerely,

Gokul Vishnu
