Dear Hiring Manager,

I am writing to express my interest in **backend software engineering** opportunities within your organization. With 7 years of experience building scalable microservices using Java and Spring Boot, I bring strong expertise in designing REST APIs, implementing event-driven architectures with Kafka, and optimizing backend systems across e-commerce, telecom, and insurance domains.

In my current role at **Infosys**, I develop REST APIs supporting end-to-end e-commerce workflows for T-Mobile, enabling seamless device and accessory purchases across web platforms. I have **led the migration of backend services from Java 8 to Java 17, improving performance and ensuring compliance with modern security standards**. I also design modular microservices architectures and implement Kafka-based messaging systems to enable reliable communication across distributed services. My focus on refactoring legacy systems and building comprehensive JUnit test suites has helped improve code quality and reduce defects.

Previously, at **Cognizant**, I contributed to insurance platform development by building and enhancing REST APIs and implementing Spring Security for robust authentication and authorization. I also optimized backend logic and integrations, improving system reliability and reducing operational failures. At **Capgemini**, I worked on high-scale order management systems, improving API performance and throughput through caching, asynchronous processing, and performance tuning.

Earlier in my career, I gained full-stack exposure by developing Angular-based interfaces and integrating them with Spring Boot services, strengthening my understanding of end-to-end application development and cross-functional collaboration.

I am particularly interested in opportunities in Germany, where there is a strong emphasis on engineering quality, scalable system design, and reliable backend architectures. With my experience in microservices, event-driven systems, and performance optimization, along with my intermediate German proficiency, I am confident in my ability to contribute effectively to high-performing engineering teams.

I would welcome the opportunity to discuss how my backend engineering expertise and experience in building resilient, scalable systems can support your organization's technology goals.

Thank you for your time and consideration.

Sincerely,

Amey Chittar
