Summary

Backend-focused software engineer with 7 years of experience building scalable microservices using Java and Spring Boot. Strong expertise in REST APIs, event-driven architecture using Kafka, and backend system optimization across e-commerce, telecom, and insurance domains. Proven ability to modernize legacy systems, improve performance, and deliver production-ready services in Agile environments. Experienced in cross-functional collaboration, code quality practices, and backend system reliability.

Core Skills

- **Programming Languages:** Java, JavaScript, HTML, CSS
- **Event Streaming & Messaging:** Apache Kafka
- **Frontend & Web Technologies:** Angular, Responsive Web Development
- **Database Management:** MySQL
- **Backend & Microservices:** Spring Boot, Microservices Architecture, REST APIs
- **Testing & Quality Assurance:** JUnit, API Testing
- **Tools & DevOps:** Jenkins, Postman, JIRA

Experience

Infosys

July 2024 – July 2025

Software Engineer – T-Mobile

Bengaluru, India

- Develop REST APIs supporting end-to-end e-commerce workflows, enabling seamless purchase of devices and accessories across web platforms.
- Migrate backend microservices from Java 8 to Java 17 improving application performance and ensuring compliance with security standards.
- Design and build modular microservices architecture improving scalability and independent service deployment.
- Implement Kafka-based producers and consumers enabling reliable event-driven communication across distributed systems.
- Refactor legacy services and develop JUnit test suites improving code quality and reducing defects by 20%.

Cognizant

September 2023 – June 2024

Software Engineer – NIC

Bengaluru, India

- Develop and enhance REST APIs supporting insurance policy lifecycle management improving customer interaction workflows.
- Implement Spring Security for authentication and authorization ensuring data protection and regulatory compliance.
- Optimize backend logic and service integrations improving system reliability and reducing failures by 15%.
- Collaborate with frontend and QA teams to deliver production-ready releases aligned with business requirements.

Capgemini

May 2021 – April 2023

Software Engineer – McDonald's

Bengaluru, India

- Develop REST APIs supporting order lifecycle management including order placement, tracking, and delivery coordination.
- Optimize API performance using caching, query tuning, and asynchronous processing improving throughput by 25%.
- Implement logging, exception handling, and monitoring improving system reliability and traceability across services.
- Collaborate with DevOps teams for deployment and release cycles ensuring stable production environments.
- Resolve production issues and maintain system uptime through proactive debugging and issue resolution.

- Develop Angular-based UI components enabling responsive and user-friendly service request management across devices.
- Design and implement REST APIs using Spring Boot supporting technician assignment and service tracking workflows.
- Integrate frontend and backend systems enabling real-time communication between users and technicians.
- Optimize backend workflows improving response time and system efficiency by 25%.
- Collaborate with cross-functional teams to deliver scalable and maintainable application features.

Education

PES University	July 2015 – August 2018
<i>Master of Technology in Computer Science & Engineering (72%)</i>	<i>Bengaluru, India</i>
ACS College of Engineering	August 2010 – June 2014
<i>Bachelor of Engineering in Computer Science & Engineering (CGPA: 7.2/10)</i>	<i>Bengaluru, India</i>

Languages

- English – Full Professional Proficiency (C1)
- German – Basic Proficiency (A1)
