Dear Hiring Manager,

I am writing to express my interest in **QA Aseptic or Sterility Assurance** roles within your organization. With over 5 years of experience in pharmaceutical quality assurance across sterile manufacturing environments, I bring strong expertise in aseptic processing, contamination control, and GMP compliance aligned with USFDA and EMA standards.

In my current role as **Senior Executive – QA Aseptic Surveillance at Somerset Therapeutics**, I maintain aseptic compliance across critical cleanroom environments through structured environmental monitoring and surveillance programs. I have successfully supported USFDA audit readiness with zero major observations related to aseptic practices. My work focuses on implementing contamination control strategies through microbial trend analysis and FMEA-based risk assessments, enabling proactive identification and reduction of contamination risks. I also lead internal audits and drive corrective actions to ensure sustained compliance across sterile and non-sterile areas.

Previously, at **Biocon Biologics**, I was responsible for steam sterilizer operation and validation, including load development, cycle optimization, and requalification aligned with GMP and EMA requirements. I presented validation protocols during regulatory audits and contributed to successful audit outcomes without critical observations. My experience also includes delivering structured training programs to enhance compliance and operational efficiency across teams.

Earlier in my career at **Mylan Laboratories**, I gained hands-on experience in sterile injectable manufacturing and packaging operations, including serialization systems, documentation review, and GMP-compliant process execution. Managing teams and ensuring adherence to strict quality standards strengthened my ability to operate effectively in regulated, high-volume production environments.

I am particularly interested in opportunities in Germany, where strong emphasis is placed on quality systems, regulatory rigor, and continuous improvement in pharmaceutical manufacturing. With my experience in EU GMP-aligned environments and intermediate German proficiency, I am confident in my ability to integrate into cross-functional teams and contribute to maintaining high standards of sterility assurance and product quality.

I would welcome the opportunity to discuss how my experience in aseptic quality assurance, validation, and audit readiness can support your organization's quality and compliance objectives.

Thank you for your time and consideration.

Sincerely,

Mohankumar Muthusami
