Dear Hiring Manager,

I am writing to express my interest in a **Software Engineer / Full-Stack Developer** position within your organization. With over 7 years of experience in building scalable web applications and cloud-native systems, I bring a strong combination of backend engineering, frontend development, and infrastructure automation expertise.

Currently, I work as a **Software Engineer III at Guidewire**, where I design and implement AI-assisted automation solutions for release workflows. My contributions have reduced manual release effort by 30% while improving deployment reliability and system traceability. I also play a key role in enhancing CI/CD pipelines and collaborating across teams to improve developer experience and system performance.

Prior to this, at **Thoughtworks**, I worked as a **Senior Consultant** where I built event-driven systems integrating enterprise platforms like Workday, and engineered backend optimizations that reduced API processing time from one hour to under 20 minutes. I have hands-on experience designing microservices architectures, automating large-scale data validation workflows, and implementing infrastructure-as-code using Terraform on GCP. My work consistently focused on improving efficiency, scalability, and security across distributed systems.

I also bring experience from product-based environments, having developed backend systems and integrated secure payment gateways at Amphisoft Technologies, along with building interactive dashboards and learning platforms that significantly improved user engagement.

Technically, I am proficient in **Python, Node.js, Java, and modern frontend frameworks like React and TypeScript, along with strong experience in cloud technologies, Docker, Kubernetes, and CI/CD tools**. Beyond technical skills, I enjoy mentoring junior developers and contributing to collaborative, high-performing teams.

I am particularly interested in opportunities in Germany and am open to relocation. I am excited about the prospect of contributing to innovative engineering teams and building robust, scalable solutions that create real impact.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my experience aligns with your team's needs.

Sincerely,

Vinitha Pukazh Bagya R
