Dear Hiring Manager,

I am applying for SAP MM and PP roles in Germany where manufacturing teams need stable planning, clean procurement execution, and tight MM-FI integration. I bring 10+ years of experience in SAP MM and PP across implementations, configuration, rollouts, and production support, including EU stakeholder delivery. I work hands-on across P2P, MRP/MPS, production order execution, and shop floor postings, SIOF and I focus on outcomes that improve reliability and reduce operational noise.

In my current role at Burckhardt Compression, I own MM/PP configuration across all global plants and keep planning and execution aligned through disciplined master data, technical solution, FSD, and process controls. I tune MRP variants and background jobs to reduce planning exceptions and stabilize replenishment. I also strengthen GR/GI, confirmations, and backflush controls to improve inventory accuracy and reduce downstream disruptions.

I deliver fixes where the process meets integration. I implement BADI and user exit changes for MM-FI scenarios with ABAP developers then validate postings end-to-end with FI-CO and logistics teams. I run incidents and change resolutions in ServiceNow using root cause analysis (RCA), targeted training, and clear documentation in JIRA and SNOW so issues do not return. I also support visibility through Power BI and Tableau reporting on SAP ECC SAP BW hana DB data, backed by validation checks that improve trust in dashboards.

Your Germany-based manufacturing environment will benefit from structured execution, cross-module coordination, and predictable release quality. I align purchasing, planning, and shop floor teams around clear process rules, strong master data governance, and measurable operational KPIs. **I hold SAP S/4HANA Sourcing and Procurement GLOBAL certification** and a Lean Six Sigma Green Belt, and I work comfortably in fast-moving delivery and support environments.

Sincerely,

Jagjit Behera
