Dear Hiring Manager,

I am writing to express my interest in **senior quality engineering, QA leadership, or AI-driven testing** roles within your organization. With over 13 years of experience leading quality engineering initiatives across large-scale enterprise and financial systems, I bring deep expertise in test strategy, automation architecture, and emerging AI-powered validation frameworks.

In my current role at **Morgan Stanley**, I lead end-to-end engineering delivery for Wealth Management client reporting platforms across global teams. I have architected a Generative AI-based validation platform using Python, FastAPI, and microservices, significantly improving validation throughput and accuracy. Additionally, I designed an Agentic AI-driven automation framework integrating Jira and GitHub to generate BDD test cases and streamline quality workflows, reducing manual effort and improving efficiency. My work has consistently focused on leveraging advanced AI/ML techniques, including LLM evaluation and prompt engineering, to transform traditional QA practices into intelligent, scalable systems.

Previously at **Infosys and Mindtree**, I built and scaled automation frameworks across UI, API, and data layers, improving test coverage, deployment reliability, and defect detection. I have extensive experience in DevOps-driven environments, integrating continuous testing within CI/CD pipelines using tools such as Jenkins, and Docker. My ability to align quality engineering with business outcomes has enabled faster releases, improved system reliability, and reduced operational risk across complex platforms.

Beyond technical expertise, I have led global teams and driven quality transformation initiatives by establishing structured processes, governance models, and continuous improvement practices. My leadership approach focuses on collaboration, scalability, and delivering measurable impact across engineering organizations.

I am particularly interested in opportunities in Germany, where engineering excellence, precision, and innovation are strongly emphasized. With my background in AI-driven testing, modern automation platforms, and financial systems, I am eager to contribute to organizations building next-generation, high-quality digital systems.

I would welcome the opportunity to discuss how my experience in quality engineering leadership, AI-powered testing, and scalable automation can support your organization's goals.

Thank you for your time and consideration.

Sincerely,

Shrikant Patil
