Dear Hiring Manager,

I am writing to express my interest in **Control Systems, Industrial Automation, or PLC Engineering** roles within your organization. With over 9 years of experience in designing distributed control systems and scalable automation architectures, I bring strong expertise in PLC programming, SCADA systems, and Industry 4.0 integration across aerospace and industrial environments.

In my current role at **Schneider Electric**, I define architecture standards and develop IEC 61499-based PLC application libraries within EcoStruxure Automation Expert, enabling modular and vendor-agnostic automation solutions. I have **architected reusable function block libraries and contributed to the development of AI-enabled engineering tools that improve productivity and standardization across automation workflows**. My work involves close collaboration with global OEMs and system integrators to deliver integrated SCADA, HMI, and IIoT solutions using OPC UA and modern industrial frameworks.

Previously, I **contributed to the design of standardized automation libraries and SCADA systems, supporting real-time monitoring, alarm management, and system integration across global industrial deployments**. I also led gap analysis and migration strategies from legacy PLC systems to modern distributed control architectures, ensuring seamless system transitions and compliance with industrial standards.

Earlier in my career, I **led end-to-end automation design and commissioning for safety-critical aerospace systems, including ISRO Gaganyaan engine test facilities**. I have hands-on experience in multi-vendor control systems, high-availability architectures, and execution of FAT and SAT procedures, ensuring system reliability and compliance in mission-critical environments.

I am particularly interested in opportunities in Germany, where strong emphasis is placed on engineering excellence, standardization, and advanced industrial automation. With my experience in IEC standards, OPC UA-based systems, and Industry 4.0 solutions, along with intermediate German proficiency, I am confident in my ability to contribute effectively within cross-functional and multicultural engineering teams.

I would welcome the opportunity to discuss how my experience in control systems architecture, industrial automation, and intelligent engineering solutions can support your organization's innovation and operational goals.

Thank you for your time and consideration.

Sincerely,

**Vishnu MP**
