Dear Hiring Manager,

I am writing to express my interest in a **Piping Engineer / Senior Piping Engineer position** within your organization. With over 12 years of experience in piping engineering and project execution across pharmaceutical and industrial process environments, I bring strong expertise in utility system engineering, multidisciplinary coordination, and compliant project delivery within GMP-regulated facilities.

Currently, I work as a **Senior Piping Engineer at Novo Nordisk Engineering**, where I support the engineering and execution of piping systems for pharmaceutical manufacturing projects. My role involves delivering clean utilities, black utilities, and waste systems from design coordination through installation completion, mechanical completion, and system handover. I actively participate in installation completion line walks, punch list management using Dalux, and commissioning readiness activities including pressure testing, FAT, and SAT, ensuring full compliance with GMP, GEP, and internal quality standards.

A key aspect of my work involves coordinating closely with process, mechanical, E&I, automation, and construction teams to resolve design interfaces and maintain installation readiness throughout project execution. I also contribute to engineering deliverables such as MTO preparation, technical documentation, deviation tracking, and schedule alignment within EPC project frameworks.

Earlier in my career, I **worked with global EPC organizations including Exyte, Fluor, Jacobs, and Toyo Engineering**, where I supported piping engineering activities such as piping layout development, isometric extraction, constructability reviews, and 3D model coordination using tools including AutoCAD Plant 3D, SmartPlant 3D, Navisworks, and Revit. Through these roles, I contributed to several international projects across Europe, Central Asia, and the Middle East.

My experience working on **major pharmaceutical projects** such as **Novo Nordisk facilities in Denmark, AGC Biologics, and LEO Pharma** has strengthened my understanding of regulated manufacturing environments and complex multidisciplinary engineering coordination.

I am particularly motivated to contribute to engineering organizations in Germany that focus on advanced pharmaceutical manufacturing and high-quality engineering execution. With strong technical expertise, international project exposure, and German language proficiency at B1 level, I am confident in my ability to integrate effectively into global engineering teams and support successful project delivery.

I would welcome the opportunity to further discuss how my piping engineering experience and project execution background can contribute to your organization.

Sincerely,
Mohammed Khaja Akramuddin
