Summary

Piping Engineer with 12+ years of experience in the design and execution of piping systems across the pharmaceutical and oil & gas industries. Expertise in clean utilities, black utilities, installation completion, mechanical completion, FAT, and SAT within GMP and GEP regulated environments. Strong background supporting EPC lifecycle activities from design coordination through construction readiness and system handover. Proven capability aligning multidisciplinary engineering and construction teams to ensure compliant system delivery. Experienced working with global EPC contractors on international pharmaceutical projects.

Core Skills

- **Engineering Coordination:** Interface Coordination with Process, E&I, and Construction Teams
- **3D Design & Modeling Tools:** AutoCAD Plant 3D, SP3D (SmartPlant 3D), Inventor
- **Engineering Review Tools:** Revit, Navisworks (Model Coordination & Review), Dalux
- **Drafting & Documentation:** AutoCAD (2D Drafting), MS Office (Project Support & Documentation)
- **Piping Project Execution:** Installation Completion Line Walks, Mechanical Completion, FAT & SAT, Schedule Tracking, Progress Reporting

Experience

Novo Nordisk Engineering

March 2018 – Present

Senior Piping Engineer

India

- Led mechanical and piping system execution for pharmaceutical facilities covering clean utilities, black utilities, and waste systems from design through installation completion and system handover.
- Performed installation completion line walks and mechanical walkdowns using Dalux, creating punch lists and supporting HSE inspections across utility systems.
- Supported system commissioning readiness by coordinating pressure testing, FAT, and SAT activities ensuring compliance with GMP, GEP, and project quality standards.
- Coordinated multidisciplinary teams including process, mechanical, E&I, automation, and construction to resolve system interfaces and ensure installation readiness.
- Prepared MTOs, cost estimates, deviation lists, and technical documentation aligned with project schedules and internal QMS requirements.

Exyte

May 2023 – July 2023

Senior Piping Engineer

India

- Supported piping engineering for pharmaceutical facilities including P&ID review, piping layout optimization, and constructability analysis for utility systems.
- Conducted 3D coordination and model review using Navisworks and Revit to identify design clashes and resolve interdisciplinary conflicts.
- Collaborated with mechanical, process, and construction teams to address design interfaces and maintain schedule alignment under tight project timelines.

Fluor

August 2017 – March 2018

Piping Engineer

India

- Executed detailed piping engineering for industrial process projects including isometric extraction, piping layout development, and MTO preparation.
- Coordinated with piping stress engineers and construction teams to ensure piping systems complied with ASME and project-specific engineering standards.
- Supported project engineering teams with piping documentation, design updates, and technical reviews during project execution phases.

Piping Designer

India

- Developed 2D and 3D piping layouts, isometrics, and fabrication drawings using AutoCAD and SmartPlant 3D for international EPC projects.
- Supported piping engineers with design development, piping routing, and model coordination across multidisciplinary engineering teams.
- Prepared fabrication drawings, pipe support layouts, and general arrangement drawings supporting construction documentation.
- Maintained engineering documentation and updated piping models ensuring alignment with project specifications and client requirements.

Education

Visvesvaraya Technological University (V.T.U)**2013***Bachelor of Engineering in Mechanical Engineering*

India

Projects

- **M3MA – Novo Nordisk, Denmark**

Supported Mechanical Installation Completion (IC) and SAT activities for pharmaceutical utility systems including clean utilities, black utilities, and waste collection systems while coordinating with multidisciplinary engineering teams.

- **AGC NPF – AGC Biologics, Denmark**

Led piping design activities during BD and execution phases including initial routing development, MTO-based cost estimation, isometric and GA drawing review, and participation in client design reviews.

- **LEO FAR – LEO Pharma, Denmark**

Developed 3D piping models using AutoCAD Plant 3D for greenfield pharmaceutical facilities covering utility rooms, skid piping, steam reduction stations, and clean utility systems including isometric extraction.

- **IM1 – Novo Nordisk, Denmark**

Designed clean and black utility piping systems including heat exchanger and pump piping while routing mixing and holding tank systems using AutoPLANT and aligning with project schedules.

- **Future Growth Project – (TCO), Kazakhstan**

Engineered utility stations and firewater piping systems within process modules including heat exchanger and pump piping, isometric generation using SP3D, and schedule tracking.

- **Ethylene Cracker Unit – Turkmen Gas, Turkmenistan**

Developed piping layouts for tank farm and process areas including dyke wall layouts, tie-in identification, and generation of isometric, GA, and pipe support drawings using SP3D.

- **VOPAK Terminal Eurotank – Dow Sadara, Belgium**

Designed jetty and loading station piping systems including pipe supports and structural fabrication drawings while coordinating across multiple engineering disciplines.
