Dear Sir/Madam,

I am writing to express my interest in opportunities within your organization in the areas of **business analysis, treasury technology transformation, or delivery management**. With over fifteen years of experience in global banking environments, I have developed strong expertise in translating complex treasury and trading workflows into scalable technology solutions that support operational efficiency, regulatory compliance, and system modernization initiatives.

In my current role at **Standard Chartered**, I lead **business analysis and delivery initiatives focused on treasury platform modernization**. I recently managed the decommissioning of the MX2.11 platform by coordinating migration of trading workflows to strategic systems, reducing legacy technology risk while improving operational stability. My responsibilities include managing the end-to-end requirements lifecycle, facilitating Agile delivery, establishing RAID governance frameworks, and directing UAT strategy to ensure stable releases across global treasury operations.

Previously at **Société Générale**, I worked extensively on **FX and Money Market platform migrations and regulatory programs**, including implementations aligned with **Volcker and MiFID requirements**. I collaborated closely with risk, compliance, and technology teams to embed automated controls within trading workflows and improve reporting consistency across legacy systems. Earlier in my career, I also gained hands-on operational experience managing trade confirmations, settlements, and SWIFT messaging across treasury operations, giving me strong domain understanding of the full trade lifecycle.

What motivates me most is working at the intersection of finance and technology—bridging business requirements with scalable platform solutions while ensuring regulatory integrity and operational resilience. I am particularly interested in contributing to organizations in Germany that are driving modernization of treasury systems, regulatory technology, and capital markets infrastructure. I am currently pursuing the Germany Opportunity Card (Chancenkarte) to support my relocation and long-term career opportunities in Germany.

With my background in treasury platforms, requirements engineering, Agile delivery leadership, and global stakeholder coordination, I believe I can add meaningful value to transformation programs and complex technology initiatives within your organization.

I would welcome the opportunity to further discuss how my experience aligns with your team's goals. Thank you for your time and consideration.

Sincerely,

Yashas Balaji
