Dear Hiring Manager,

I am writing to express my interest in **Data Scientist or Machine Learning** roles within your organization. With 4.5 years of experience in NLP, LLMs, and predictive modeling, I bring strong expertise in building end-to-end machine learning solutions and translating complex data into actionable business insights.

In my recent role at **Networth Corp**, I worked on customer segmentation and risk modeling for the insurance domain, analyzing over 20K customer records. By applying PCA and K-Means clustering, I identified key behavioral segments and engineered critical risk features such as loss ratio and claim frequency. These insights contributed to improved pricing strategies and a potential reduction in loss ratio by 12%, demonstrating my ability to connect data science outcomes directly to business impact.

At **CloudBloom Systems**, I developed a recommendation engine for a learning management platform, improving course discovery and increasing completion rates by 15%. I also built scalable data pipelines using AWS and created interactive Power BI dashboards to support data-driven decision-making, enhancing user engagement and referral metrics. This experience strengthened my ability to design and deploy scalable analytics solutions in cloud-based environments.

Earlier in my career at **Riverdale Software Solutions**, I focused on **NLP and machine learning applications, including developing transformer-based document summarization systems using BERT, BART, and T5 models**. I also built sentiment analysis solutions using Hugging Face transformers and deployed user-facing applications using Streamlit. Additionally, I published a Springer paper titled "Document Processing and Summarization using Transformers" (February 2026), where I developed and evaluated transformer-based NLP models using ROUGE and BLEU metrics to generate accessible summaries from educational PDFs, further strengthening my expertise in advanced NLP and LLM-based solutions.

I am particularly interested in opportunities in Germany, where organizations emphasize innovation, engineering excellence, and data-driven decision-making. With my experience in LLMs, recommendation systems, and scalable ML pipelines, along with intermediate German proficiency, I am confident in my ability to contribute effectively in a collaborative and multicultural environment.

I would welcome the opportunity to discuss how my experience in machine learning, NLP, and data-driven product development can support your organization's innovation and growth objectives.

Thank you for your time and consideration.

Sincerely,

Pavana Priya C
