Dear Hiring Manager,

I am writing to express my interest in the **Data Analyst or Business Intelligence Analyst** position within your organization. With over five years of experience in data analysis, dashboard development, and market intelligence across consulting and digital marketplace environments, I bring a structured and results-focused approach to analytics and reporting.

In my current role at **Deloitte USI**, I analyze internal prospect and revenue datasets using SQL and Python to identify client acquisition opportunities and improve targeting strategies. I design automated Power BI dashboards that integrate multi-source data and enable real-time KPI tracking for leadership teams. My work centers on translating complex datasets into clear, actionable insights that support strategic decision-making.

Previously, at **Refract Consultancy**, I developed interactive dashboards using Power BI and DAX for enterprise clients, including BAJAJ. I built financial and segment analysis models to support performance evaluation and business planning. At IndiaMART, I extracted and transformed large datasets using SQL and delivered dashboards monitoring traffic, lead generation, and conversion metrics. These experiences strengthened my ability to combine technical analysis with business context to drive measurable improvements.

I offer strong proficiency in **SQL, Power BI, Python, Excel, and statistical analysis**, along with solid stakeholder collaboration skills. I focus on building scalable reporting frameworks, improving data accessibility, and ensuring clarity and accuracy in executive communication.

I am motivated to contribute to a data-driven organization where analytics directly supports strategic growth and operational excellence. I would welcome the opportunity to further discuss how my background and skills can support your team's objectives.

Thank you for your time and consideration.

Sincerely,

Aparna Agarwal
