Dear Hiring Manager,

I am writing to express my interest in **Machine Learning or Generative AI engineering** opportunities within your organization. With over nine years of experience spanning research, academia, and enterprise software delivery, I specialize in building production-ready machine learning systems and Generative AI solutions that solve real-world business problems.

In my current role as a **Senior Developer and Machine Learning Engineer at Endava**, I design and implement enterprise Generative AI solutions including RAG-based chatbots, multi-agent assistants, and AI-driven analytics systems. My work involves developing scalable architectures using large language models, vector databases, and FastAPI services while managing deployment in containerized and cloud environments. I recently delivered an AI-powered product recommendation platform for Johnson & Johnson and built a multi-agent AI assistant using LangChain orchestration and Redis-backed caching.

Previously at **GalaxE Solutions**, I developed machine learning pipelines and predictive models for healthcare analytics, automated ETL and validation workflows, and supported the migration of enterprise applications to cloud infrastructure including AWS and OpenShift. These projects strengthened my experience in MLOps, data engineering, and deploying reliable ML solutions within large enterprise environments.

Alongside my industry experience, I hold a **PhD in Information and Communication Engineering from Anna University** and have published multiple research papers in the areas of machine learning and optimization algorithms for clinical decision systems. This research background enables me to approach machine learning problems with both theoretical depth and practical engineering discipline.

I am particularly interested in opportunities in Germany where organizations are advancing Generative AI adoption, applied machine learning systems, and scalable data platforms. With strong Python engineering experience, hands-on cloud deployment skills, and a collaborative approach to cross-functional delivery, I am excited about contributing to innovative AI teams and solving complex engineering challenges.

I would welcome the opportunity to discuss how my background in machine learning, Generative AI systems, and enterprise solution delivery can support your organization's technology initiatives.

Thank you for your time and consideration.

Sincerely,

Elgin Christo VR
