Dear Hiring Manager,

I am writing to express my interest in a Frontend Engineer position within your organization. With over eight years of experience building scalable and high-performance web applications, I have developed strong expertise in React, modern JavaScript, and enterprise-grade UI architecture across cybersecurity and supply chain domains.

In my current role at NETSCOUT, I contribute to the development of an enterprise threat and risk investigation platform used to detect and mitigate cybersecurity risks. I design and implement React-based modules, optimize large dataset search interfaces, and enhance application performance and accessibility in alignment with WCAG 2.0 standards. My work focuses on building maintainable, modular, and scalable frontend systems that support complex business workflows while ensuring responsive and user-centric experiences.

Previously, at NuVizz and AMIT ACE Micromatic Group, I delivered UI modernization initiatives, built reusable component frameworks, and developed responsive dashboards supporting logistics and industrial monitoring platforms. These roles strengthened my ability to collaborate effectively in Agile environments, integrate RESTful APIs, and maintain high-quality, production-ready code.

I am particularly motivated to contribute to organizations in Germany that value engineering excellence, performance optimization, and accessible digital experiences. With professional proficiency in English and intermediate proficiency in German, I am committed to integrating into a multicultural work environment and contributing meaningfully to cross-functional teams.

I would welcome the opportunity to further discuss how my frontend engineering expertise can support your product and technology objectives. Thank you for your time and consideration.

Yours sincerely,
Shwetha Kodandram
